Connecting nonprofits to the networks, research and advocacy they rely on

Helping donors make smarter philanthropic decisions

Responding to needs in real time

Fidelity Charitable Board of Trustees
A message from the Board of Trustees and the President

When the COVID-19 pandemic hit, Amy Sample Ward was in the final stages of planning for the 2020 Nonprofit Technology Conference. The conference, a massive gathering of more than 2,400 nonprofit professionals that Sample Ward’s organization, NTEN, puts on every year, showcases how technology can help nonprofits better serve their communities. The conference was planned for the end of March, but the pandemic quickly made the gathering impossible. The event of nearly 200 nonprofit learning sessions, representing 62 percent of NTEN’s budget, was suddenly canceled. Soon after that, the conference venue was being used as a COVID-19 field hospital.

NTEN, a Fidelity Charitable Trustees’ Initiative grantee, had to quickly switch from planning conference panels and networking events to helping nonprofit staff get through the sudden transition to working remotely and migrating programs and services to a digital format.

“We had so many community members saying, ‘We’ve never had a virtual team before. What do we need to do?’”

Since the beginning of the pandemic, we’ve all had to shift our work to accommodate the unprecedented times we now live in. Nonprofits are no exception. Simultaneous to this adjustment to new working conditions, nonprofits saw a sharp increase in need among the communities they serve just as typical volunteering and fundraising events abruptly became unsafe.

One thing that helps make the nonprofit sector resilient to such dramatic change is solid infrastructure; technology, data, training and networks that help every nonprofit organization pivot and push forward in uncertain and frightening times. This year, the Fidelity Charitable Trustees’ Initiative made 40 grants, totaling nearly $12.7 million to support social sector infrastructure.

During the pandemic, we’ve all realized the importance of a strong support network; trusted friends and family who we rely on for comfort and guidance. For many people, their support network includes not only friends
or family, but also the nonprofits they rely on for services. The social sector that meets these needs also needs a support network—one that prepares nonprofits to weather the storm of any disaster and continue to do their work well into the future.

“Responding to COVID has meant that our programs are more relevant than ever,” said Sample Ward.

She said community members went from asking her team the “very real-time operational questions” about technology and working from home, to forward-looking questions, like “What would it mean if our program was online? What community barriers would exist?” They went from “being stuck in fear about how to survive as an organization to action mode and being able to move forward.”

At the same time nonprofits were seeking ways to continue their work, donors were actively seeking advice on how to help. Infrastructure organizations also provide donors with the tools and knowledge they need to effectively support nonprofits in achieving their missions.

Our current times are turbulent and constantly changing. The ability for nonprofits to keep current and share knowledge is directly linked with how well they can serve their communities and achieve their missions. Despite this deep need, infrastructure and capacity-building projects often remain underfunded.

This is why the Fidelity Charitable Trustees’ Initiative funds infrastructure and capacity-building work. A solid foundation that connects nonprofits to their donors and to each other is essential to the resiliency of the nonprofit sector so that it can be prepared for anything.

“Investing in infrastructure and capacity is the only way we can build a sector that is able to navigate times like these without severe disruption.”

– Amy Sample Ward
CEO of NTEN, Trustees’ Initiative grantee

Since inception, the Fidelity Charitable Trustees’ Initiative has made grants totaling more than $47M
The Fidelity Charitable Trustees’ Initiative (Trustees’ Initiative) is a direct grantmaking program of Fidelity Charitable, separate from its donor-advised fund program. Last fiscal year, ending June 30, 2020, the Trustees’ Initiative made 40 grants totaling nearly $12.7 million to strengthen the nonprofit sector and enable organizations to better serve their communities and staff.

To realize this mission, the Trustees’ Initiative provides funding for social sector infrastructure; the networks, resources, data and advocacy that nonprofits as well as donors rely on to achieve the most impact. Grants from the Trustees’ Initiative focus on organizations, programs and projects that:

- Strengthen intermediaries and networks that provide information, research and advocacy needed by nonprofits to achieve their intended impact.
- Enhance individual donors’ ability to make effective and informed giving decisions.

In addition to these pillars, the Trustees recognize the need to reserve flexible funding in order to react to an emergency. This year, this flexible funding was crucial to respond to critical health needs around the country and to ensure that infrastructure organizations were poised to help nonprofits respond to the challenges presented by the pandemic.

"Infrastructure is all about how we can empower our network to unlock new ways to work together."

– Asha Currán
CEO of GivingTuesday, Trustees’ Initiative grantee
Fidelity Charitable Trustees’ Initiative 2020 Impact

In the fiscal year ending June 30, 2020, the Trustees’ Initiative made 40 grants totaling nearly $12.7M

Since inception, the Trustees’ Initiative has made grants totaling more than $47M

$7.5M Nonprofit infrastructure grants

$3.6M Donor education grants

$1.65M Special opportunities grants

Grants from the Trustees’ Initiative support:

- **Data & Tools**: Improve the quality and usefulness of data available to individual donors
- **Research & Advocacy**: Improve the ability of nonprofits to advocate for key issues of importance
- **Membership**: Increase donor participation in peer education / networks
- **Capacity Building**: Strengthen capacity of nonprofits in key areas
- **Research & Communications**: Increase understanding about the scope and role of philanthropy, especially with respect to individual donors
- **Information Sharing & Collaboration**: Increase ability of nonprofits to share data, coordinate efforts, and collaborate more effectively
Supporting the foundation of a strong, healthy sector

The imperative to bolster the social sector has become more important than ever before; The need has never been greater, not only for nonprofits, but for the communities they serve. When COVID-19 hit, nonprofits saw a vast increase in people seeking services. At the same time, typical revenue generators like fundraising events and galas were canceled, in-person programs became unsafe and volunteer involvement plummeted. A recent Fidelity Charitable survey of more than 1,000 charitable individuals found that 47 percent planned to decrease their volunteer efforts due to the pandemic.*

How does a nonprofit adapt and continue to fulfill its mission, under those circumstances? How does an entire sector pull together to meet an unprecedented amount of need? One answer is strong infrastructure.

The term infrastructure typically conjures up the image of roads and bridges. Social sector infrastructure is not unlike those roads and bridges; they may seem like an afterthought on most days, but they are vitally important to the entire country. Access to the right technology, accurate research, best practices, and networks for collaboration may not be the first things we think of when we think of supporting nonprofits, but these shared resources are essential to helping nonprofits achieve their impact. They help nonprofits respond to adapting environmental conditions and allow them to more effectively navigate uncertain times. Providing support in this area is a way to uplift the entire social sector in a time of crisis.

“Good works don’t happen on their own,” said Terry Mazany, Executive Director of the Community Foundation Opportunity Network, a Trustees’ Initiative grantee. “Nonprofits need support in areas like data, research, policy, technology and trusted relationships.”

Asha Curran, CEO of GivingTuesday, also a Trustees’ Initiative grantee, agrees: “We’re living in a world where it’s going to take the work of broad, deeply connected networks to create the kind of change that we need to see... We are simply not going to get through this unless we get through it together.”

* Artemis Strategy Group, an independent research firm, conducted a research study on behalf of Fidelity Charitable about the effect of COVID-19 on giving and volunteering behavior. 1,842 adults in the U.S. who donated at least $1,000 to charity in 2019 were surveyed in March 2020.
The American Red Cross uses an innovative disaster event management system, called RC View, to prepare for, respond to and recover from disasters, including COVID-19. With RC View, the organization can rapidly access and map mission-critical information about locations affected by disaster.

With support from the Trustees’ Initiative and other donors, the Red Cross is expanding the use of RC View, both internally and with disaster relief partners across the country through a Disaster Partner Hub that aims to promote greater coordination of disaster response resources.

“RC View [is] the most powerful incident management tool we have, second only to our passionate workforce,” said Brad Kieserman, Vice President of Disaster Operations and Logistics in Disaster Cycle Services for the American Red Cross.

RC View uses maps and data visualization that allow Red Cross staff and partners to quickly assess and react to current needs in a disaster. The tool allowed the Red Cross to provide its workforce and partners with key situational awareness information regarding the pandemic.

Having a tool like this—one that makes collaboration and data sharing across partners easier—helps the Red Cross assist more people in a disaster situation.

“This investment helps the Red Cross disaster workforce and our partners rapidly identify and coordinate resources to meet client needs, so that hope and help can be delivered when it’s needed most,” said Don Herring, Chief Development Officer at the American Red Cross.
Nonprofits rely on intermediaries and networks that provide research and tools to help them achieve the most impact. The Trustees’ Initiative supports intermediary organizations that offer much-needed capacity-building services to the sector, like training, technology, research and data, and networks to learn from each other’s work. When nonprofit staff are supported in these ways, nonprofits can more effectively fulfill their missions and better serve their clients.

When people need help, finding the right place to get it can be difficult—and with the COVID-19 pandemic and ensuing unemployment crisis, lots of people need help. But people seeking services may not know where to look to find them and the service information they find may not be accurate.

That’s where software nonprofit Benetech is working to make a difference—by remaking the way people in need can find and connect to social services. Pre-pandemic, thanks to a previous grant from the Trustees’ Initiative, Benetech was already building and piloting software to enable nonprofit social service organizations to quickly share and maintain their service information like location, availability and more. The platform also makes these services more accessible by enabling providers of the nation-wide phone help line 211 to make accurate referrals. Benetech accelerated their work on that software, called Service Net, when the pandemic hit, and calls to 211 lines skyrocketed.

“What we do is now more relevant than ever; we’ve got a new wave of people who need the social safety net but don’t know how to navigate it,” CEO Betsy Beaumon said. “It should be as easy to find the services that help with food insecurity as it is to go online to find a restaurant and make a reservation— but it’s not, and that’s what Service Net is here to solve.”

A reliable data-sharing platform also creates a crucial tool for nonprofits and other helping professionals to provide referrals in fields outside their own scope of service, Beaumon said.

California-based Benetech was already piloting the system in the San Francisco Bay Area prior to COVID-19, but the nonprofit is now fielding calls from organizations volunteering as software testers from as far away as Missouri and North Carolina.

“This is not a one-city or one-region issue. It may sound small, but to change the way the entire social sector gets and shares information about services is a systems change,” Beaumon said. “The point of getting Service Net to where it is today was so when something like COVID-19 came along, we were ready.”
Community foundations typically focus on meeting the particular needs of their individual regions, but when COVID-19 hit, all communities suddenly shared a common foe. The pandemic shined a light on racial and economic disparities in health outcomes, employment and education across the United States. For the past several years, the Community Foundation Opportunity Network (CFON) had already been working with community foundations from around the country on shared approaches to addressing social and economic mobility, so it was uniquely positioned to help the community foundations in its network mobilize quickly to further their work addressing the inequities made starkly apparent by the crisis.

“We needed to match the urgency of now,” Executive Director Terry Mazany said. “We called around to community foundations and said, ‘We’re ready to go if you are.’”

The CFON team has been providing critical networking, learning and sharing opportunities for its members, so they can learn from what has worked for their peers and better serve their individual communities.

“As place-based organizations, community foundations have not addressed a common initiative,” Mazany said, “and that’s what makes this collective commitment to economic mobility so promising.”

The grant is also allowing CFON’s network of community foundations to learn faster, develop new approaches, prototype those ideas and scale programs that are demonstrably closing the mobility gap.

SPOTLIGHT

Community Foundation Opportunity Network
In addition to funding nonprofit infrastructure, the Trustees’ Initiative also invests in donor effectiveness. As nonprofits have struggled with the vast challenges brought on by the pandemic, donors have sought to help. When donors are well informed, they can be better, more effective givers. These grants go to nonprofits that create resources and tools for donors that help them best achieve their intended impact.

“\textit{The Trustees’ Initiative addresses effectiveness on both sides of the giving equation; donors have the education and knowledge they need to make smart philanthropic decisions and nonprofits have the tools they need to do their best work.}”

When donors are well informed, they can be more effective givers. Donors who know where and how to give can maximize their impact on the causes they care about. The pandemic has brought new urgency to this education.

When nonprofits have the data they need to reach and motivate potential donors, they can be more effective in fundraising while also ramping up services to meet rising needs.

ideas42 is a nonprofit that uses behavioral science to develop tools to address both sides of this situation. Behavioral sciences—like psychology, economics and neuroscience—each explore aspects of the drivers behind human behavior, particularly those that govern personal choice. ideas42 uses evidence from behavioral science to improve nonprofit program design.

Funding from the Fidelity Charitable Trustees’ Initiative has allowed the ideas42 team to reach a broader audience with their successful series of capacity-building workshops that teach nonprofits how to implement behavioral science insights into their program designs. With the grant, the team is launching online versions of these classes, with increased interactivity and applied learning on topics ranging from streamlining processes to improving communications. The workshops are slated to launch online this fall. Previously, they had only been available in the New York area.

“The grant allows us to lever up the impact we can make with this important content for nonprofits,” Managing Director Anthony Barrow said. “When nonprofits have the tools and training they need, they are better set up for success.”

ideas42 is also currently in the rapid iteration and design phase of two tools aimed at encouraging donors to align their giving with their values and empowering them to make quick, impactful philanthropic choices in times of need. One tool provides donors a comprehensive picture of not just the impact of their giving, but insight into the values they affirm through their giving choices. The second tool queries donors on their philanthropic objectives and values, then regularly suggests a curated list of charities that align with those giving objectives.

“We generated these ideas through years of deep donor research across the giving space,” Vice President Omar Parbhoo said. “Now we can build out and iterate on these ideas to see how best to support donors in meeting their true giving intentions.”
Responding to needs in real time

When the COVID-19 crisis hit, Fidelity Charitable responded with donor guidance on how to help meet immediate medical needs, how to protect vulnerable populations most impacted by the pandemic and how to sustain the nonprofit sector as a whole. Additionally, the Trustees’ Initiative committed more than $1 million to support immediate pandemic response efforts, focusing on medical needs, community safety and assistance for the charitable sector. In alignment with Fidelity Charitable’s guidance to sustain all nonprofits, and recognizing the need to give differently, and more, in the face of the pandemic, the Trustees’ Initiative also offered matching grants to meet emerging local needs.

Strengthening the sector’s infrastructure is fundamental in times of prosperity, and especially so in times of disaster. With solid infrastructure, nonprofits can be more adaptive in the face of rapid change.

“We think the future of the sector is embracing the ability to adapt more quickly,” said Dan Cardinali, CEO of Independent Sector, a Trustees’ Initiative grantee.

Having solid social sector infrastructure allows nonprofits to keep providing services in the face of a disaster—it also helps prepare the sector for whatever comes next.

“COVID is the tip of the spear for the current safety net crisis,” says Benetech’s CEO Betsy Beaumon. “The resulting leap in unemployment is driving even greater demand for social services. In parallel, the need for effective tools to allow organizations to provide visibility and access to these services has increased as well.”

Having this flexible disaster relief funding allows the Trustees’ Initiative to meet emergency needs when disaster strikes, while also continuing to fund the long-term goals of increasing the capacity of the social sector and helping all nonprofits remain resilient in the face of new challenges.
